Workflow Assessment Kit

## Quality Control Kits

### Comprehensive Quality Control for Proteomics Workflows

- Workflow Performance kits assess your complete proteomics workflow, from sample preparation through to quantitation.
- Kits include peptides spanning a range of masses and chemistries to check performance on a wide variety of analytes
- Specifically designed for quality control of LC-MS based proteomics workflows
- Fully-optimized for a variety of LC-MS platforms from different vendors

## PEPTIQUANT™ PLUS QUALITY CONTROL KITS

At MRM Proteomics Inc., we understand the importance of accurate and reproducible quantitation. That's why we developed PeptiQuant™ Plus Quality Control Kits, which are specially optimized tools to assess the performance of quantitative MRM-MS proteomics workflows. PeptiQuant™ Plus Quality Control Kits are offered in two types: Instrument Performance Kits and Workflow Performance Kits.

**Workflow Performance Kits** assess the performance of your complete proteomics workflow, from sample preparation through to quantitation by allowing you to compare the protein concentrations you measure to known reference values. This kit is a valuable training tool and comes with methods that can be used

to standardize your implementation. It is also useful to measure operator and instrument performance and to facilitate troubleshooting.

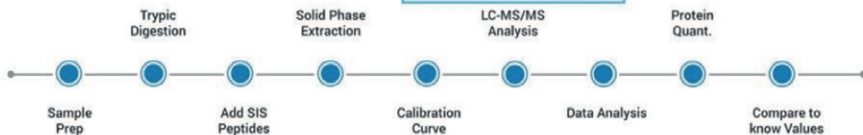

Instrument Performance Kits are a complementary tool for routine instrument monitoring. Each PeptiQuant™ Plus Quality Control kit comes complete with internal standards, instrument files, quantitation software and clear instructions.

Whether you are running your first PeptiQuant™ Plus Proteomics Kit or you have been running your own MRM-MS proteomics assays for decades, our QC Kits are there to help ensure that your proteomics workflow and instrumentation is up to standard for every sample you analyze.

### Quality Control Kits for every step of the way

Evaluate the effectiveness of your complete proteomics workflow with PeptiQuant™ Workflow Performance Kits

Routinely monitor your instrument performance with PeptiQuant™ LC-MS Platform Performance Kits
